

Rebate needs review

I WAS delighted to see Geebung company Earthsave was given a warm welcome by its customers when the company received the House and Home Trades award at the 2008 *Northside Chronicle* Business Achiever Awards.

With the triple challenges of the climate crisis, water shortages and peak oil, Queensland is well placed to see a huge expansion in the use of solar water heaters, photovoltaic electricity

systems and other solar technologies in the rapidly expanding suite of renewable technologies.

For the sake of our children, let's hope the Federal Government reviews its present photovoltaic rebate program.

Let's hope we soon see another gold medal Queensland champion, a Queensland solar street followed by Queensland's first solar suburb.

I wonder how many of our

federal politicians now have solar water heaters on their own homes?

Solar heaters are the most cost-effective and environmentally beneficial products you can choose to dramatically cut your electricity bills.

Many thanks to the *Northside Chronicle* for establishing the Business Achiever Awards.
